1 Task 1: Normalisation

Figure 1 below shows part of a spreadsheet used by a tavern which allows customers to book rooms for events and functions. Each row represents a booking.

Figure 1: Tavern Bookings

Assumptions

- A room cannot have multiple bookings at the same time
- Auto-incrementing Customer# has been created, replacing CustomerPhone as customer identifier
  - Auto-incrementing identifier avoids user input error which may result in multiple customers with the same phone number
- BookingDate time element has been split into its own attribute
  - New attributes created called BookingTimeStart and BookingTimeEnd
  - Duration attribute is now derived
  - Allows system to check availability of room before a new booking can be created

1.1 0NF: Unnormalised form

R1 = (Customer#, CustomerPhone, CustomerName, Booking#, BookingDate, BookingTimeStart, BookingTimeEnd, Room#, RoomName, RoomCapacity)

1.2 1NF: First normal form

~~R1 = (**Customer#**, CustomerPhone, CustomerName, {**Booking#**, BookingDate, BookingTimeStart, BookingTimeEnd, Room#,RoomName, RoomCapacity})~~

R11 = (**Customer#**, CustomerPhone, CustomerName)

R12 = (**Booking#**, BookingDate, BookingTimeStart, BookingTimeEnd, Room#, RoomName, RoomCapacity, *Customer#*)

1.3 2NF: Second normal form

No partial dependencies, already 2NF.

R11 = (**Customer#**, CustomerPhone, CustomerName)

R12 = (**Booking#**, BookingDate, BookingTimeStart, BookingTimeEnd, Room#, RoomName, RoomCapacity, *Customer#*)

1.4 3NF: Third normal form

R11 = (**Customer#**, CustomerPhone, CustomerName)

~~R12 = (**Booking#**, BookingDate, BookingTimeStart, BookingTimeEnd, Room#, RoomName, RoomCapacity, *Customer#*)~~

R121 = (**Booking#**, BookingDate, BookingTimeStart, BookingTimeEnd, *Room#*, *Customer#*)

R122 = (**Room#**, RoomName, RoomCapacity)

1.5 Named relations

Customer = (**Customer#**, CustomerPhone, CustomerName)

Booking = (**Booking#**, BookingDate, BookingTimeStart, BookingTimeEnd, *Room#*, *Customer#*)

Room = (**Room#**, RoomName, RoomCapacity)
