

CSG 1102 – Operating Systems Workshop09

- Discuss different network topologies. Compare the relative advantages and disadvantages of these topologies.
- Which topology do they think is employed in their school or organization network? Why?
- Compare different types of switching methods. Which switching method do they think is most commonly used on the Internet? Ask them to substantiate their answers.
- Research to find the transmission medium used in today's high-speed LANs. Ask them to compile a list of the key characteristics of that medium
- Research to compile a list of any three routers employed in today's networks along with their key characteristics and applications.
