TCP/IP Game

Special Instructions for Students studying in OL SUPP mode

A. Playing the TCP/IP Game

Since participation in the exercise will assist you in understanding TCP/IP, how it functions and its problems, students studying OL SUPP have several of options available to play the TCP/IP game.

1. Use the Blackboard discussion board to arrange for a team of five of you to get together and carry out the TCP/IP exercise. All the instructions and materials you will need are detailed in the TCP/IP document in Module 4.
2. You could form a team of family and/or friends to carry out the exercise.
3. You could attempt to do the exercise virtually by using an email relay type of arrangement between the team members.
4. You could come up with another method for carrying out the exercise and get your tutor's OK for it.

It is important that you be pro-active in getting organised to participate. You need to make sure that you are in a team and that you are fully involved in the team's attempt at the TCP/IP exercise to get the maximum benefit from the activity.
